EDUCATION

Northeastern University, Boston MA

Masters of Science in Software Engineering Systems, May 2025

Relevant Coursework / Experience: **Data Structures, Databases, Distributed Systems concepts, Software Engineering**

University of Mumbai, Mumbai, India

Bachelors of Science in Computer Science, May 2023

SKILLS

Languages: Python, JavaScript, SQL, Java, Node.js

Backend & Systems: REST APIs, distributed systems, data pipelines, batch and real-time processing, RAG pipelines, microservices

Cloud & Infrastructure: AWS (SQS, EC2, S3, IAM), Docker, CI/CD, PostgreSQL, pgvector

AI/ML & Data: LangChain, OpenAI API, retrieval-augmented generation, vector embeddings, schema design, data validation

Frontend: React, TypeScript, performance optimization, component architecture

PROFESSIONAL EXPERIENCE **LegalPro+, Software Engineer – October 2025 – Present, Remote**

- Designed and implemented Python-based backend services and data pipelines to ingest, validate, and process structured data at scale, ensuring high throughput and maintainable, well-documented code.
- Built API-first backend integrations with CRM, email, and CMS platforms using RESTful and asynchronous patterns, enabling reliable cross-platform data flow.
- Developed logging, error handling, and monitoring infrastructure that reduced data errors by 40% and improved production system reliability.
- Wrote clean unit and integration tests and integrated CI/CD pipelines to support stable, repeatable deployments.
- Collaborated cross-functionally with engineers and stakeholders through code reviews, testing, and release cycles to ship production-ready backend features.

ALVO INNOVENT LLC, Web Development Intern, May 2022 – July 2022, Mumbai, India

- Developed responsive web interfaces focused on performance and usability, reducing bounce rates by approximately 20%.
- Built and maintained **backend APIs** using **Node.js and C#**, improving response times and debuggability.
- Optimized **backend logic** and database queries to **reduce API latency** and improve overall application performance.
- Implemented input validation and error handling to improve backend reliability and reduce runtime failures.
- Integrated **AWS EC2 and S3** for deployments, storage, and uptime stability.
- Participated in code reviews, testing, and debugging to maintain production quality.

PROJECTS

Jobwise – RAG-Powered Job Search Assistant, Solo Project – February 2026

- Built an end-to-end RAG pipeline using FastAPI, LangChain, and OpenAI embeddings to semantically match resume skills against job descriptions via pgvector similarity search.
- Implemented AI-driven cover letter generation, interview prep, and skill gap analysis using retrieval-augmented generation from parsed resume chunks.
- Designed PostgreSQL schema with pgvector for vector storage and semantic search; built React frontend with dark mode, analytics tracking, and auto-parsing of LinkedIn job postings.

TaskFlow – Distributed Job Queue System, Solo Project – January 2026

- Engineered a distributed job queue using AWS SQS with automatic retry logic and exponential backoff, handling multiple job types with fault tolerance at scale.
- Implemented PostgreSQL persistence tracking 500+ job executions with status transitions, error logging, and performance metrics; containerized with Docker and health check endpoints.
- Built real-time React monitoring dashboard displaying queue statistics and system health with 2-second refresh; achieved 100% test coverage with Jest across handlers and API endpoints.

PRobe – AI-Powered Code Review Agent, Solo Project – March 2026

- Built an agentic code review tool using FastAPI and the Anthropic API that fetches GitHub PR diffs via the GitHub API, runs them through Claude, and returns structured reviews categorized across **3 severity levels (high, medium, low)** with exact file and line references and suggested fixes.
- Designed structured JSON output schema for Claude responses; reviewed a real Django PR and surfaced **2+ high-severity bugs** missed in the original diff, including a non-ASCII character handling regression.
- Built a **React frontend** with severity filter toggles, markdown export, PR metadata display, and a review history sidebar; integrated **GitHub OAuth flow** for private repo access.
