

EDUCATION

Northeastern University, Boston, MA

Masters of Science in Software Engineering Systems, May 2025

Relevant Coursework / Experience: **Data Structures, Databases, Distributed Systems concepts, Software Engineering**

University of Mumbai, Mumbai, India

Bachelors of Science in Computer Science, May 2023

SKILLS

Languages: Python, SQL, Java, JavaScript, Node.js

Backend & Data Systems: Data pipelines, backend services, REST APIs, batch and real-time processing, RAG pipelines

Cloud & Infrastructure: AWS (SQS, EC2, S3, IAM), Docker, CI/CD pipelines, PostgreSQL, pgvector, distributed systems

Data Technologies: Relational databases, schema design, data validation, vector embeddings

AI/ML Tools: LangChain, OpenAI API, retrieval-augmented generation (RAG)

PROFESSIONAL EXPERIENCE

LegalPro+, Software Engineer – October 2025 – Present, Remote

- Designed and implemented Python-based backend services and data pipelines to ingest, validate, and process structured data at scale.
- Built and maintained reliable batch-style processing workflows with validation checks to ensure data quality and consistency.
- Built API-first backend integrations with CRM, email, and CMS platforms using **RESTful** and asynchronous patterns.
- Developed logging, error handling, and monitoring that reduced data errors by **40%** and improved system reliability.
- Wrote unit and integration tests and integrated CI/CD pipelines to support stable, repeatable deployments.
- Worked across backend services and supporting UI integrations to ensure smooth end-to-end feature delivery.
- Collaborated with engineers and stakeholders through code reviews, testing, and release cycles to deliver production-ready backend systems.

ALVO INNOVENT LLC, Web Development Intern, May 2022 – July 2022, Mumbai, India

- Developed responsive web interfaces focused on performance and usability, reducing bounce rates by approximately **20%**.
- Built and maintained **backend APIs** using Node.js and C#, improving response times and debuggability.
- Optimized **backend logic** and database queries to **reduce API latency** and improve overall application performance.
- Implemented input validation and error handling to improve backend reliability and reduce runtime failures.
- Integrated **AWS EC2 and S3** for deployments, storage, and uptime stability.
- Participated in code reviews, testing, and debugging to maintain production quality.

PROJECTS

Jobwise – RAG-Powered Job Search Assistant, Solo Project – February 2026

- Built a **RAG pipeline** using FastAPI, LangChain, and OpenAI embeddings to parse resumes and match skills against job descriptions via pgvector semantic similarity search.
- Implemented **AI-driven** cover letter generation, interview prep, and skill gap analysis using retrieval-augmented generation from parsed resume chunks.
- Designed **PostgreSQL database** with **pgvector** extension for vector storage and semantic search across resume and job description embeddings.
- Built **React frontend** with dark mode, saved content history, analytics tracking, and automatic job description parsing from LinkedIn postings.
- Integrated automatic field extraction from pasted job descriptions, parsing role title, company name, and requirements to reduce manual input and streamline the matching workflow.

TaskFlow – Distributed Job Queue System, Solo Project – January 2026

- Engineered distributed job queue processing system using AWS SQS, handling multiple job types with automatic retry logic and exponential backoff for fault tolerance.
- Implemented PostgreSQL persistence layer tracking **500+ job executions** with status transitions, error logging, and performance metrics.
- Built real-time monitoring dashboard with React displaying queue statistics, job history, and system health metrics with **2-second refresh** intervals.
- Developed comprehensive test suite with Jest achieving **100% coverage** across job handlers and **API endpoints**.
- Containerized application with Docker and implemented health check endpoints for real-time service monitoring and zero-downtime deployments.

Price Forecasting and Data Automation System, Solo Project – July 2025

- Built Python-based data ingestion and scraping pipelines to collect, normalize, and validate pricing data for 1,000+ products with **95% parsing accuracy**.
- Designed **SQL-backed schemas** and indexing strategies to support efficient historical queries and aggregations.
- Implemented **ETL workflows with data validation** and deduplication logic to ensure consistency across multiple scraped sources.
- Built a full-stack data application with Python backend services, SQL-based data processing, and a frontend dashboard for analytics and insights.
- Automated scheduled ingestion jobs processing **10,000+ records** daily with **<2% error rate**, feeding real-time analytics and pricing trend visualizations.
