EDUCATION Northeastern University, Boston, MA

Masters of Science in Software Engineering Systems, May 2025

Relevant Coursework / Experience: **Data Structures, Databases, Distributed Systems concepts, Software Engineering**
University of Mumbai, Mumbai, India

Bachelors of Science in Computer Science, May 2023

SKILLS

Languages: Python, SQL, Java, JavaScript, HTML, CSS,

Frontend: React, jQuery, responsive UI development

Backend & APIs: Node.js, REST APIs, GraphQL, asynchronous processing

Cloud & Infrastructure: AWS (EC2, S3), Docker, CI/CD pipelines, logging, monitoring

Data: Relational databases, schema design, data pipelines, data validation

Testing: Unit testing, integration testing

PROFESSIONAL EXPERIENCE

LegalPro+, Software Engineer – October 2025 – Present, Remote

- Designed and implemented Python-based backend services and data pipelines to ingest, validate, and process structured data at scale.
- Built and maintained reliable batch-style processing workflows with validation checks to ensure data quality and consistency.
- Built API-first backend integrations with CRM, email, and CMS platforms using **RESTful** and asynchronous patterns.
- Developed logging, error handling, and monitoring that reduced data errors by **40%** and improved system reliability.
- Wrote unit and integration tests and integrated CI/CD pipelines to support stable, repeatable deployments. • Worked across backend services and supporting UI integrations to ensure smooth end-to-end feature delivery.
- Collaborated with engineers and stakeholders through code reviews, testing, and release cycles to deliver production-ready backend systems.

ALVO INNOVENT LLC, Web Development Intern, May 2022 – July 2022, Mumbai, India

- Developed responsive web interfaces focused on performance and usability, reducing bounce rates by approximately **20%**.
- Built and maintained backend APIs using Node.js and C#, improving response times and debuggability.
- Optimized backend logic and database queries to reduce API latency and improve overall application performance.
- Implemented input validation and error handling to improve backend reliability and reduce runtime failures.
- Integrated AWS EC2 and S3 for deployments, storage, and uptime stability.
- Participated in code reviews, testing, and debugging to maintain production quality.

PROJECTS Price Forecasting and Data Automation System, Solo Project – April 2025

- Built Python-based data ingestion and scraping pipelines to collect, normalize, and validate pricing data for **1,000+ products** with **95% parsing accuracy**.
- Designed **SQL-backed schemas** and indexing strategies to support efficient historical queries and aggregations.
- Implemented **ETL workflows** and scheduled jobs to keep datasets continuously updated with minimal manual intervention.
- Built a full-stack data application with Python backend services, SQL-based data processing, and a frontend dashboard for analytics and insights.
- Focused on writing clean, testable code and handling edge cases to improve system reliability and scalability.
- Collaborated on feature design, iterated through rapid prototyping, and refined functionality based on testing and feedback. • Built backend data pipelines and services to support batch analytics workflows, transforming and storing data for downstream analysis.

Figroup – Group Expense & Investment Tracker, Team of 5 – Jan 2025 – Apr 2025

- Built backend services using Node.js and SQL databases to support group expenses, balances, and transaction history.
- Designed REST APIs with request validation, error handling, and consistent response schemas.
- Implemented **40+ unit tests** and CI/CD workflows to support automated testing and deployment.
- Added monitoring hooks and logging to maintain **99% service uptime**.

FinSync – Subscription & Expense Tracker, Team of 4 – Sep 2024 – Dec 2024

- Developed **backend APIs** supporting subscription tracking, recurring expenses, and user analytics.
- Designed and optimized SQL schemas and queries, improving query performance by **35%**.
- Built SQL-based analytics pipelines to generate usage and spending reports, reducing reporting time by **50%**.
